30th October 2016

**Subject: Letter of recommendation for Gabor Stajer**

To whom it may concern.

Stajer worked for two months, from 05.09.2016 to 06.11.2016, at the ICT Engineering Department at the Bergen University College, Norway, as part of the IAESTE exchange program.

During his stay, he worked on modelling in a domain-specific language for Lego EV3 robots, that we have developed in the group. This included graphical modelling of the robot behaviour, and adapting code generation to Python, with a tool that is being developed by our PhD students. He suggested improvements to the tool, and contributed several new case studies using the robots.

During his stay, he showed commitment, eagerness to develop new models, and was hard working. He put great effort into documenting all work and make the knowledge gained in the project available to future students. He also participated in events to demonstrate his work to the public in a science fair and other members of the department, and he showed good communication and interaction skills.

Stajer successfully collaborated with another IAESTE student in the project, and the PhD students. He was capable of working in a team, and improve the performance that both students would have achieved separately. The working atmosphere with Stajer was always positive and stimulating. We wish Stajer all the best in his future career.

Sincerely,

  
Volker Stolz  
Associate Professor
